Subject: MY-AII, Model 212, Modified Door Shells

New door shells have been used in production since 05/2013. With these doors, the strips installed at door bottom are no longer required and therefore should not be installed or retrofitted.

Similarly, the mounting holes for the lower strip have been discontinued on the door shell, and are no longer required.

Once the old door shell supply is depleted in the parts department, only the new door shells without mounting holes will be available. When installing the new door shells in "older" vehicles (up to 04/2013), the previously mounted strip can no longer be installed. This is discontinued without replacement. The table below lists the new door shells in which the strip can no longer be installed.
