RAV4 EV ECU Flash Reprogramming Procedure

Introduction

Flash reprogramming allows the ECU software to be updated without replacing the ECU. Flash calibration updates for the RAV4 EV are released as field-fix procedures described in individual Service Bulletins. This bulletin details the ECU flash reprogramming process and outlines use of the Techstream Health Check Function and the Tesla Powertrain Service Diagnostics program.

NOTE
Flash reprogramming of the RAV4 EV ECU can only be performed with the Tesla Powertrain Service Diagnostics program.

RAV4 EV ECU Flash Reprogramming Procedure

Techstream Preparation

Selecting the Correct VIM.

Techstream software requires a VIM selection before it can be used for reprogramming. Perform the following:

1. Select Setup from the Techstream Main Menu screen.
2. Select VIM Select from the Setup drop down menu.

Figure 1.
RAV4 EV ECU Flash Reprogramming Procedure

Techstream Preparation (Continued)

3. Select the correct Interface Setup from the drop down list.

For Techstream 2.0, select MongoosePro MFC.

NOTE
Mongoose Driver MUST be installed before Mongoose selections will be available.
Refer to the Technical Information System (TIS), Diagnostics – Scantool page for additional information.

4. Click OK.

Process Overview

Techstream ECU flash reprogramming is a 4-step process:

1. Verify the vehicle’s applicability for recalibration and locate desired calibration file by performing the Techstream Health Check function.

NOTE
Techstream will automatically search TIS for the appropriate Service Bulletin using the current Calibration ID from the vehicle. Calibration file links can be found embedded in the corresponding Service Bulletin.

2. Connect the GR8 Battery Diagnostic Station using “Power Supply Mode” only.

The GR8 Battery Diagnostic Station includes a Power Supply Mode to help maintain battery voltage at 13.5 volts during ECU reprogramming.

NOTICE
ECU damage may occur if the correct battery charger mode setting is NOT used.

3. Perform the RAV4 EV ECU software update using the Tesla Powertrain Service Diagnostics program.

Launch the Tesla Powertrain Service Diagnostics program and initiate the update process to complete the reprogramming.

4. Attach the Authorized Vehicle Modification Label.

Modifications to ECU calibrations MUST be recorded and properly displayed on the vehicle using the Authorized Modification Label.
RAV4 EV ECU Flash Reprogramming Procedure

Operation Procedure

1. Verify the vehicle’s applicability for recalibration and locate desired calibration file.
   A. Connect Techstream and establish a vehicle connection.
   B. Click the Health Check button on the System Select tab.

   ![System Selection Menu](image)

   **Figure 2.**

Operation Procedure (Continued)

F. Available calibration updates are indicated by a Yes link in the Update column. Click the Yes link to access the appropriate Service Bulletin on TIS.

NOTE
- Note any DTCs stored in systems that will be flash reprogrammed.
- Clicking the Yes link will automatically launch TIS and perform a calibration search.

G. Log into TIS. (If already logged in, skip this step.)

Operation Procedure (Continued)

H. To review the Service Bulletin and access the calibration file, click the Service Bulletin link in the Document Title column of the Calibration Search Result portlet.

**NOTE**
Only Toyota Certified Technicians and above may access calibration files.

2. Connect the GR8 Battery Diagnostic Station.
   A. Connect the GR8 Battery Diagnostic Station to the vehicle and turn it ON.
   B. Select Power Supply Mode by following the screen flow below.

**NOTICE**
- ECU damage may occur if the correct battery charger and mode setting are NOT used.
- Power Supply Mode is used to maintain battery voltage at 13.5 volts while flash reprogramming the vehicle.
- For details on how to use the GR8 Battery Diagnostic Station, refer to the GR8 Instruction Manual located on TIS, Diagnostics – Tools & Equipment – Battery Diagnostics.

Operation Procedure (Continued)

3. Perform the RAV4 EV ECU software update using the Tesla Powertrain Service Diagnostics program.

After reviewing the procedures outlined in the selected Service Bulletin, launch the Tesla Powertrain Service Diagnostics program.

**NOTE**
The vehicle may require special preparation — please review the selected Service Bulletin carefully.

A. Click **Start**.

B. Click **All Programs**.

C. Click **Tesla Powertrain Service Diagnostics RAV4**.

Operation Procedure (Continued)

NOTICE

Errors during the flash reprogramming process can permanently damage the vehicle ECU. Minimize the risk by following the steps below.

- Battery voltage MUST NOT FALL BELOW 11.4 volts during reprogramming. Confirm battery voltage is higher than 11.4 volts, but be sure voltage DOES NOT RISE ABOVE 16.0 volts during reprogramming.
- Turn OFF all vehicle accessories (e.g. audio system, A/C, interior lights, DRL, etc.). Do NOT add to or significantly change the vehicle's electrical load while reprogramming.
- Confirm cable connections between the vehicle and Techstream PC are secure.
- Do NOT disconnect or turn off Techstream PC or vehicle ignition, and do NOT close Tesla Powertrain Diagnostic program during reprogramming.
- Set parking brake.
- If the battery’s state of charge or capacity are in question, test with SST. No. 00002-V8150-KIT “Digital Battery Analyzer,” and follow Service Bulletin No. PG001-06, “Battery Maintenance for In-Stock Vehicles & Pre-Delivery,” or the appropriate “Maintenance for HV & Auxiliary Batteries” Service Bulletin.
- The GR8 Battery Diagnostic Station MUST be used in Power Supply Mode to maintain battery voltage at 13.5 volts while flash reprogramming the vehicle. For details on how to use the GR8 Battery Diagnostic Station, refer to the GR8 Instruction Manual located on TIS, Diagnostics – Tools & Equipment – Battery Diagnostics.

D. Disconnect the Techstream DLC3 connector.

Operation Procedure (Continued)

J. The ECU Software Update will begin and take approximately 10 - 20 minutes to complete.

**NOTE**
Do NOT turn ignition OFF or disconnect the battery charger during this process.

Figure 14.

K. Click OK.
RAV4 EV ECU Flash Reprogramming Procedure

Operation Procedure (Continued)

L. Disconnect the Tesla Powertrain Diagnostic Cable and close the program.
M. Connect the Techstream DLC3 cable to the OBDII connector under the dash.
N. Perform a Health Check to confirm the firmware was installed correctly and to check for DTCs.
