2007-2011 Cadillac Escalade Models
2007-2011 Chevrolet Silverado, Avalanche, Suburban, Tahoe
2007-2011 GMC Sierra, Yukon Models

This PI was superseded to update Recommendation/Instructions. Please discard PIT5066.

The following diagnosis might be helpful if the vehicle exhibits the symptom(s) described in this PI.

Condition/Concern

Some customers may report that their vehicle will not crank intermittently due to a dead battery

It has been identified through Engineering that there is a potential for the HVAC afterblow function to cause an intermittent battery draw.

Recommendation/Instructions

If no other vehicle system or component is identified as the root cause for the battery drain condition and the afterblow function is enabled, reprogram the HVAC Control Module with the latest calibration currently available in TIS2WEB.

Warranty Information

For vehicles repaired under warranty use:

Labor Operation	Description	Labor Time
2810015	K33 HVAC System Control Module Reprogramming	Use Published Labor Operation Time

Please follow this diagnostic or repair process thoroughly and complete each step. If the condition exhibited is resolved without completing every step, the remaining steps do not need to be performed.

GM bulletins are intended for use by professional technicians, NOT a "do-it-yourselfer". They are written to inform these technicians of conditions that may occur on some vehicles, or to provide information that could assist in the proper service of a vehicle. Properly trained technicians have the equipment, tools, safety instructions, and know-how to do a job properly and safely. If a condition is described, DO NOT assume that the bulletin applies to your vehicle, or that your vehicle will have that condition. See your GM dealer for information on whether your vehicle may benefit from the information.
