18SP707Rev – EPA07/10 Three-Filter Fuel System DD13 High Pressure Fuel Feed Lines, Mounting Bracket and P-clips Service Kit (P/N: A0000700832)

⚠️ WARNING:

PERSONAL INJURY
All parts provided within this kit must be installed in the proper locations, and MUST be fastened to the specified torque. Failure to properly torque hardware/components will result in failure of a high pressure fuel feed line, resulting in possible fire and/or personal injury.

⚠️ WARNING:

PERSONAL INJURY
All parts provided with this kit are single-use items and cannot be reused. Reuse of hardware/component items may result in the failure of a high pressure fuel line, resulting in possible fire and/or personal injury.
NOTICE:
Failure to follow these instructions will result in catastrophic damage to the engine and will not be covered under warranty.

KIT DESCRIPTION
This service kit includes all necessary parts to replace the high pressure fuel feed lines, mounting bracket and P-clips in the event one of these parts are loosened, removed or missing from the engine.

KIT CONTENTS
Service kit P/N: A0000700832 contains all of the necessary parts to replace the high pressure fuel feed lines on EPA07/10 DD13 engines.

Removal of the High Pressure Fuel Rail Feed Lines

Remove as follows:

⚠️ WARNING:
PERSONAL INJURY
To prevent the escape of high pressure fuel that can penetrate skin, ensure the engine has been shut down for a minimum of 10 minutes before servicing any component within the high pressure circuit. Residual high pressure fuel may be present within the circuit.

1. Disconnect the batteries.

2. Remove and discard the return lines P-clip bolt from the mounting bracket (1).

3. Remove and discard the two bolts and P-clips (6) from the mounting bracket (1).

4. Remove and discard the mounting bracket bolts (2) from the intake manifold and discard the mounting bracket (1).

**NOTE:**
When using tool J-48770 to remove the high pressure fuel rail feed lines, hold the high pressure pump fittings with a 24mm wrench. If the high pressure pump fittings are loosened while removing the high pressure fuel rail feed lines, re-torque the fittings to 75 N·m (55 lb·ft).
5. Using tool J-48770, remove and discard the high pressure fuel rail feed lines (5) and vibration dampers (4) from the fuel rail and high pressure fuel pump.

6. Remove and discard the return lines P-clip (3).

**Installation of the High Pressure Fuel Rail Feed Lines**

Install as follows:

**NOTE:**
DO NOT install bolts and fittings using power tools. All bolts and fittings MUST be installed using hand tools.

| WARNING: |
| PERSONAL INJURY |
| All hardware components must be installed in the proper locations, and MUST be fastened to the specified torque. Failure to properly torque hardware/components will result in failure of a high pressure fuel feed line, resulting in possible fire and/or personal injury. |

**NOTE:**
New high pressure fuel rail feed lines have permanent vibration dampers.
1. Install the new return lines P-clip (3) (P/N: A4730700440) on to the return lines.

2. Clean the sealing area inside the high pressure fuel pump fittings using a clean lint free cloth.
3. Clean the sealing area inside the high pressure fuel rail using a clean lint-free cloth.

4. Install the rear high pressure fuel line (5) (P/N: A4710780410) to the fuel rail and the high pressure fuel pump. Hand tighten the nuts.

5. Using tool J-48770, torque the rear high pressure fuel line nuts to 40 N·m (30 lb·ft).

6. Install the front high pressure fuel line (5) (P/N: A4710780410) to the fuel rail and the high pressure fuel pump. Hand tighten the nuts.

7. Using tool J-48770, torque the front high pressure fuel line nuts to 40 N·m (30 lb·ft).

8. Install the new mounting bracket (1) (P/N: A4710700740) and two new mounting bracket bolts (2) (P/N: N910105008011) to the intake manifold. Torque to 30 N·m (22 lb·ft).

**NOTICE:**
New P-clip MUST be installed on to the high pressure fuel rail feed lines with the Lower P-clip Plate (1) inserted in to the P-clip Window (2).
NOTE:
New P-clips (1) MUST be installed perpendicular to the bracket (2) and parallel with each other. Hold P-clips in place during tightening to avoid rotation of the P-clips.

9. Install two new P-clips (6) (P/N: A4720700540) and two new bolts (P/N: N000000007957) on to the high pressure fuel rail feed lines (5) and the mounting bracket (1). Torque to 15 N·m (132 lb·in.).

10. Install a new bolt (P/N: N910105006024) on to the return lines P-clip. Torque to 15 N·m (132 lb·in.).
NOTICE:
DO NOT use the high pressure fuel rail feed lines without new P-clips and bolts installed.

CAUTION:

ELECTRICAL SHOCK
To avoid injury from electrical shock, use care when connecting battery cables. The magnetic switch studs are at battery voltage.

11. Connect the batteries.

12. Prime the fuel system. Refer to section "Priming of the Fuel System Using ESOC 350 Fuel Priming Pump."

13. Perform the Rail Pressure Bleed-Off test to verify that there are no leaks. Refer to section "Rail Pressure Bleed-Off Test Using DDDL (EPA07)." Refer to section "Fuel Injection System (FIS) Leak Detection (EPA10)."

14. If there are leaks, find the leak and repair as necessary.
