91 MIB MMI: Text messages cannot be sent using Bluetooth

91 14 39 2037087/1 April 24, 2014.

Model(s)	Year	VIN Range	Vehicle-Specific Equipment
A3	2015 - 2016	All	MIB High system

Condition

- The option to send new text messages cannot be accessed through the Messages function in the MIB MMI telephone menu.
- Additionally, the option to send text messages using "New" is greyed-out in the Messages menu (Figure 1).
- Received text messages cannot be displayed.

Technical Background

The MIB High system is the first Audi MMI system that supports the Bluetooth Message Access Profile (MAP). Some mobile phones do not have the complete set of MAP features and functions implemented in their operating systems, which affects the available options in the MMI system.

For example, the iPhone Bluetooth MAP profile does not fully support the display of text messages that were previously sent or received. In addition, iOS does not support the sending of text messages via Bluetooth. iOS only supports the display of newly-received text messages while the phone is Bluetooth-connected to the MMI.

Production Solution

Not applicable.

Service

Explain to the customer that the condition is related to the features of the mobile phone's operating system, and it is not a limitation of the MMI system.

Enabling text message notifications for iPhone:

 If incoming messages cannot be received or if the "Messages" menu is greyed-out (Figure 2), explain to the customer that the "Show Notifications" option must be enabled with the following steps.

(With Android phones, the option to allow the MMI to access the phone's text messages appears in a pop-up when the phone is first paired to the vehicle.)

 In iOS, under Settings >> Bluetooth, select "①" next to the MMI Bluetooth pairing name (Figure 3).

Technical Service Bulletin

3. Ensure that the "Show Notifications" option is enabled, which will allow the MMI system to access new text messages that are received while the iPhone is bonded to the car. (If this option is not available, it is possible that the wrong vehicle pairing was selected (check the MMI system for correct vehicle pairing name), the phone does not support MAP, or the vehicle does not have the MIB High system).

 If the Messages option is still greyed-out, go to the Bluetooth device list in the MMI (*Telephone >> Bluetooth >> Device List*). Select the phone from the list, then select "Messages" to connect the MMI to the iPhone using MAP.
