Offboard Diagnostic Information System Service (ODIS Service) – Installation Version 2.2.2 DVDs Availability

We are pleased to announce the availability of **ODIS Service Installation Version 2.2.2 DVDs**.

This new installation version consolidates all application and brand updates released online up to the DVD pressing date.

Consolidation of the recent data results in fast initial **installations** on **brand new diagnostic devices**, and fast **reinstallations on existing devices** to resolve malfunctioning software. This precludes the need to further download a large volume of online updates via your dealership network after installation and enables the devices to be put into service sooner.

V2.2.2 - Important Notes:

- Installation/reinstallation is performed from 2 DVDs.
- While the contents installed with V2.2.2 are very recent, online updates released after the version DVDs were pressed must still be downloaded and installed (a much smaller volume).
- Brand new VAS 6150C diagnostic laptop and VAS 6160A diagnostic tablet shipments from today's date are scheduled to include the V2.2.2 DVDs.
- **V2.2.2 is NOT an update version! Please DO NOT order and use the V2.2.2 DVDs on existing devices that already have the latest online updates installed and are functioning normally.**

As a result of the above, **V2.2.2 DVDs are not automatically shipped to every dealer**. Order these DVDs **ONLY** if you wish to reinstall the software on an existing device to resolve malfunctioning software.

Order the V2.2.2 DVD set free of charge from:

www.vw.techliterature.com - order number: **010.5002.02.21**
