## Supplemental restraint system (SRS) lamp in instrument cluster lights up; fault code B000213 and/or B000113 is logged in the SRS control unit

---

Topic number	LI91.60-P-058226
Version	2
Design group	91.60 Airbag, pedestrian protection
Date	10-23-2014
Validity	Model series 176 A-Class Model series 242/246 B-Class Model series 117 CLA Produced in Rastatt until end of 09/2013; produced in Valmet until end of 11/2013  Model series 205 from production startup to end of 06/2014  Model series 166 from production startup to end of 2014
Reason for change	Validity updated; validity for model series 166 added
Reason for block	

---

### Complaint:

SRS lamp in instrument cluster lights up.

Fault code B000113 "The squib for the driver airbag (stage 1) has a malfunction. There is an open circuit." and/or

Fault code B000213 "The squib for the driver airbag (stage 2) has a malfunction. There is an open circuit." are stored in the SRS control unit.

### Cause:

Contact between interior wiring harness and steering column tube switch module (steering column tube switch module connector no.1), see attachment 1, item "1"

The exact cause is still being analyzed.

### Remedy:

Check resistance of ignition circuit using XENTRY Diagnostics:

SRS control unit -> Ignition circuits -> Airbags for driver and front passenger -> Actual values

If one of the actual values is in the upper specified value range -> Further tests as described in Xentry DAS.

If the actual values are OK -> Replace the contacts between the interior wiring harness and the steering column tube switch module (attachment 1, item "1"):

#### 1.) Replace contacts

- Create access to connector and separate from steering column tube switch module - See AR54.25-P-2802NKB Remove/install steering column tube module

- Cut cable tie directly at guide of connector (see attachment 2, item "3").

- Open secondary lock of connector (see attachment 2, item "4").

**Important:** Repair each line individually in order to avoid mixing up the lines.

- Unpin and replace contacts at steering column tube switch module connector 1, pins 8; 9; 10 and 11.

**Note:** These contacts are MLK1.2S contacts. Please use the appropriate unpinning tool from the wiring harness repair kit

Removal tool: A 220 589 01 99 25

Wire stripper: A 220 589 01 99 40

Crimper: A 220 589 01 99 10

Crimping die: A 220 589 01 99 83

Replacement contacts are supplied with a cable tail.

Connect these contacts to vehicle wiring harness using solder connectors (see AR00.19-P-0100A "Wiring harness - General repair methods" and AR00.19-P-0100-09A "Repairing wiring harness using solder connectors").

- Assemble the connector in the reverse order.

When doing so, make sure that the secondary lock (see attachment 2, item "4") is fitted and the cables are fixed in place with the cable tie (see attachment 2, item "3").

2.) Check that the edge clip is correctly positioned and firmly locked (see attachment 1, item "2").

3.) Engage plug connection and attach lead seal

**Note:** When connecting the plug connection to the steering column tube switch module, make sure that the plug connection can be felt and heard to lock.

If the fault reoccurs, please report this immediately to the relevant MPC via the TIPS Case Module.
