Possible causes:

- Contaminated DEF
- Incorrect concentration of urea in the DEF
- Biased NOx sensor
- Excessive DEF build-up in the exhaust
  2. Turn the ignition ON (key ON, engine OFF). Go to step 3.
  3. Check for other fault codes. Are there any air management system (ITV, IMP, IAT, turbocharger etc.) fault codes present?
     a. Yes; diagnose the air management system fault codes first.
     b. No; Go to step 4.
  4. Are there any Exhaust Gas Recirculation (EGR) system fault codes present?
     a. Yes; repair the EGR system fault codes first.
     b. No; Go to step 5.
  5. Are there any fuel system fault codes present?
     a. Yes; diagnose the other fault codes first.
     b. No; Go to step 6.
  6. Are there any other NOx sensor fault codes present?
     a. Yes; diagnose the other NOx sensor fault codes first.
     b. No; Go to step 7.
  7. Was another emission component related fault code repaired prior to this step?
     a. Yes; Perform a parked regeneration to verify repairs and clear fault codes.
     b. No; Go to step 8.
  8. Turn the ignition OFF. Go to step 9.
  9. Use DEF test strip A0005850202 to check for diesel fuel or oil contamination of the DEF fluid; Refer to section “Checking Diesel Exhaust Fluid Quality”. Do the test strips or visual inspection indicate that the DEF is contaminated?
     a. Yes; for diesel fuel or oil contamination, refer to 13 TS-17 (http://ddcsn-dde.freightliner.com/cps/rde/xcr/ddcsn/13TS17.pdf) and refer to appropriate Original Equipment Manufacturer (OEM) literature for DEF tank cleaning/flushing procedures. Refill the DEF tank with new DEF. Verify repair.
     b. No; Go to step 10.
  10. Using the refractometer from DEF Test Kit W060589001900, measure the DEF urea percentage. Is DEF urea percentage between 31 and 34 percent?
a. Yes; Go to step 11.
b. No; clean/flush the DEF tank and the DEF system. Refer to section "Flushing of the Diesel Exhaust Fluid System". Refill the DEF tank with new DEF. Verify repair.

11. Turn the ignition ON (key ON, engine OFF). Go to step 12.

12. Perform a DEF quantity test service routine; Refer to section "Diesel Exhaust Fluid Quantity Test - GHG14". Go to step 13.

13. Monitor the amount of DEF fluid dispensed into the DEF-safe container included in DEF test kit W060589001900. Is the amount of DEF dispensed between 108 and 132 mL (3.7 and 4.5 oz.)?
   a. Yes; Go to step 14.
   b. No; replace the DEF Dosing Unit. Refer to section "Removal of the GHG14 Dosing System Doser". Verify repair.

### WARNING: ENGINE EXHAUST

To avoid injury from inhaling engine exhaust, always operate the engine in a well-ventilated area. Engine exhaust is toxic.

### WARNING: HOT EXHAUST

During parked regeneration the exhaust gases will be extremely HOT and could cause a fire if directed at combustible materials. The vehicle must be parked outside.

### WARNING: PERSONAL INJURY

To avoid injury before starting and running the engine, ensure the vehicle is parked on a level surface, parking brake is set, and the wheels are blocked.

**NOTE:** Running the engine with DEF Doser Unit electronically disconnected will induce a DEF doser circuit fault code. This code can be erased using DiagnosticLink™ once the DEF doser electrical connector is reconnected.

15. Disconnect the DEF dosing unit electrical connector. Go to step 16.

16. Perform the "GHG14 Perform Performance Check - Low Temp ATD"; Refer to section "GHG14 Perform Performance Check - Low Temperature ATD". Are the NOx sensor readings within 50 Parts Per Million (PPM) of each other?
   a. Yes; Go to step 17.
   b. No; reconnect the dosing unit electrical connector and replace the failed NOx sensor. Refer to section "Removal of the GHG14 Selective Catalytic Reduction Inlet NOx Sensor" or Refer to section "Removal of the GHG14 Selective Catalytic Reduction Outlet NOx Sensor". Verify repair.

17. Reconnect the DEF dosing unit electrical connector. Go to step 18.

**NOTE:** Excessive DEF build-up in the exhaust can be caused by a vehicle with a high idle time, low average speed, low drive load, etc.

18. Perform parked regeneration and monitor the NOx efficiency. Is the NOx efficiency above 70%?
   a. Yes; this fault was likely caused by the DEF build-up in the exhaust which was cleared by the parked regeneration procedures. Release the vehicle.
   b. No; send the log files of the low temperature regeneration and the parked regeneration to the Customer Support Center (CSC). Then call the CSC at 800-445-1980 for further analysis and instructions.
