

Repair of pneumatic lines in seat comfort systems (lumbar support, multicontour seat, dynamic seat, massage function)

Topic number	LI91.25-P-059380
Version	1
Design group	91.25 Multicontour seat (MCS)
Date	07-10-2014
Validity	All model series with pneumatic lumbar support, multicontour seat or dynamic seat (SA codes 275, 404, 405, 406, 409, 432, 433, 434)
Reason for change	Damage code added
Reason for block	

Complaint:

Pneumatic comfort systems with insufficient performance, entirely inoperative or leaky.

Cause:

Pneumatic lines kinked, chafed through

Remedy:

1. Check pneumatic lines for leaks and kinks. (Pic 1)
2. Remove affected point using suitable tools. (Pic 2)
3. Repair affected line using connector and replacement plug coupling. (Pic 3)
4. Or: Repair affected point in the line using connectors and replacement line material. (Pic 4)

Notes:

- Do not install the connector in the immediate area of the kink.
- There must be no tensile stress acting on the pneumatic line.
- Make sure the pneumatic line has unobstructed movement.
- Pay attention to potential chafe points when routing the pneumatic line; glue a piece of felt over edges or chafe points if necessary.
- Push the line all the way onto the connector up to the stop. (Pic 5)
- The line material can be taken from existing stocks of replacement lines according to the length required. (Pic 6, Pic 7, Pic 8)
