

2014 Frontier Desert Runner Combination Meter Voluntary Service Campaign – Parts Update

Reference: PC288
Date: June 13, 2014

Innovation
that excites

Attention: Dealer Principal, Sales, Service & Parts Managers

Dealer Announcement

Please be advised the replacement combination meter parts received from model electronics on this campaign are visually different from what is removed from vehicles identified for service campaign PC288. As noted in the service campaign announcement, the incorrect combination meter from a different trim level may have been installed in these vehicles. Please make customers aware of this visual change when they arrive for their appointment. This will set customer expectations for after the repair.

The **incorrect meter** assembly has black faced gauges and only trip A/B functions.

The correct combination meter assembly for Desert Runner models is PN24820-9BF1C. The **correct combination meter** has white faced gauges, satin chrome bezels, and multi-function trip computer functions: Distance to Empty (DTE), Average Vehicle Speed (AVS), Average Fuel Economy (AFE), Elapsed Time (Running Time). The replacement combination meter received from model electronics is shown below.

The campaign bulletin will be updated to reflect this information as well.
