Barriers

US & Canada

All Products

With the upcoming change to SAP, the process for ordering barriers will change. Right and left sides will have to be specified for all barriers. This will change our current ASIST process.

Going forward, the 41" high barriers will be discontinued, and only 45" high barriers will be available.

For the front two barriers, a right and left side will need to be selected. For the most part, the options numbers do not change. However, there are some exceptions included in the listing at the end of this PAB.

For barriers mounted in the "middle" of the bus, there is a complete set of new option numbers.

There are unique option numbers for wall, floor and track mounted, separated by left or right side. These options are also included at the end of this PAB.

Ordering the correct barrier upholstery will remain the same as today.

Unlike the changes in ordering seats where we shifted to "D" codes, barriers will remain as "B" codes.

>>>>>>These changes will take effect after the price slot change on 11/18/14.<<<<<<<
