Detroit Series 4 Rear Axles

Saf-T-Liner C2

We are pleased to announce the release of Detroit Axle - Series 4 axles as standard equipment for all weight ratings on the Saf-T-Liner C2 product line. The Series 4 axle line is a much heavier duty and robust axle than the current Series 2 that it replaces. Series 4 axles are available with optional driver controlled differential locks and no spin differential equipment.

Series 4 axles will be offered in all currently available ratings plus a new 20K axle rating. The new 20K rating will help you be more competitive as you bridge between the 19K and 21K ratings.

Available rear axle ratios for the Series 4 axles are:
5.22, 5.56, 5.88, 6.14

*All Detroit Axle Series 2 and Meritor axles will be discontinued with this release.

Below is a summary of changes that will take effect in ASIST.
