Pierce Dealer

Field Update Notice # 74B255
Detroit Diesel Field Action 14M1

Pierce has been notified by Detroit Diesel Corporation (DDC) that they determined that some certified GHG14 DD platform engines will require replacement of the DEF Pump Main Filter and DEF Dosing Unit Inlet Screen.
The DEF Pump Main Filter may not be seated properly in the DEF Pump. Unseated filters lead to blockage of the DEF Dosing Unit Inlet Screen with debris, and resulting fault codes may cause customer dissatisfaction.

This service will be completed by DDC at no charge to owners of all affected engines under the engine warranty or under the provisions of this Field Action notice. Instructions for the campaign have been sent to all Detroit Authorized Repair Facilities. The time necessary to modify these engines is approximately 1.0 hour. This service will be completed at no charge, prior to April 29, 2015, under the provisions of this campaign notice.

DDC will notify the customers with instructions to contact a Detroit Diesel Authorized Repair Facility to have the Field Action performed. A copy of the notification they will receive is attached. It is the customer responsibility to contact DDC and have this work scheduled. No action needs to be taken by the Pierce dealer and no claims are to be submitted to Pierce.

A list of trucks for this campaign can be found at www.pierceparts.com. If you have any questions or concerns about this remedy, contact Pierce Customer Service at 1-888-974-3723.
