44451 2013-2014 Vehicles - Updated PC/ED Cooling Fan Diagnostics in Pin Point Test KF

Pin Point Test (PPT) KF in the Powertrain Control/Emission Diagnostic (PC/ED) manual has recently been updated to reflect improved cooling fan circuit testing. When servicing some 2013-2014 vehicles that are experiencing a lack of air conditioning, overheat or a malfunction indicator lamp (MIL) with a P0480 or P0481 in the Powertrain Control Module (PCM), the cooling fan diagnostics have been improved to better identify concerns related to the circuits and relays. Please be sure that PPT KF is carefully followed, as this could aid in preventing unnecessary cooling fan replacement.
