Subject: **i3 REX- Check Engine Light, IRAP Solution**

Intermittently, a Check Engine Light (CEL) may be illuminated on i3 REX vehicles, without a relevant fault code stored. It is an erroneous display and it's not affecting drivability, emissions, or functionality of the vehicle. To eliminate this software glitch, a temporary IRAP solution has been implemented. In case of customer's complaint of CEL illuminated (without emissions related faults stored), submit a PuMA case titled "I01 CEL - No Faults" requesting IRAP reprogramming. Make sure that the vehicle's integration level is at 14-03-505 prior to the IRAP session. SI B12 10 14 is going to be released shortly.
