44563 2014 Transit Connect - Hood Release Cable Operation

On 2014 Transit Connect vehicles a security feature prevents the hood latch release cable from being pulled to release the hood latch, when the driver's door is closed. Continued pulling on the hood release handle will cause damage to the handle and cable. Always open the door first and then pull the release cable to open the hood. Refer to page 176 of the Owner's Manual. This is a Product Characteristic.
