44716 6.4L Oil Cooler Job Aid Now Available

A job aid titled "6.4L Oil Cooler Job Aid" is now available on the PTS website under the Service Tips tab for 2008-2010 F-Super Duty vehicles equipped with a 6.4L diesel engine. 6.4L diesel engine oil coolers are being primarily replaced due to restrictions from cooling system contamination which can lead to Diagnostic Trouble Code (DTC) P012F setting. Engineering review of returned oil coolers indicates that the primary cause of oil cooler restriction is due to contamination from other components in the cooling system. This job aid is designed to provide information and tips for cooling system inspections, flushing, and refilling that can assist in proper diagnostics and prevention of repeat repairs.
