Date: May 14, 2014

Subject: Upcoming Safety Recall - 13146
Low-Beam Headlamps Inoperative

Models: 2005-2007 Chevrolet Corvette

To: All Chevrolet Dealers

Attention: General Manager, Service Advisor, Service Manager, Parts and Service Director, Parts Manager, Used Vehicle Sales Manager, and Warranty Administrator

General Motors has notified the National Highway Traffic Safety Administration (NHTSA) about an upcoming safety recall that involves all 2005-2007 model year Chevrolet Corvette vehicles. The GM recall number is 13146.

On these vehicles, when the engine is warm, the underhood bussed electrical center (UBEC) housing will expand, causing the headlamp low-beam relay control circuit routed wire to bend slightly. After the wire is repeatedly bent, it can fracture and separate. When this occurs, the low-beam headlamps will not illuminate. As the UBEC housing cools and contracts, the low-beam headlamp function may return. This condition does not affect the high-beam headlamps, marker lamps, turn signals, daytime running lamps or fog lamps. Loss of low beam headlamps when they are required could reduce the driver's visibility, increasing the risk of a crash.

The 2008-2013 model year Chevrolet Corvette vehicles will be covered under upcoming Customer Satisfaction Program 14203.

This is a courtesy notification to dealers. Dealers will be advised when the bulletins and customer notification letters are scheduled for release.

The Investigate Vehicle History screen in the Global Warranty Management system will be updated when the bulletins are released.

Please do not call GM Technical Assistance.
