

94 Headlight flickers, flickering, or warning on in cluster (all xenon headlights)

94 14 36 2029194/5 April 2, 2014. Supersedes Technical Service Bulletin Group 94 number 13-10 dated March 4, 2013 for reasons listed below.

Model(s)	Year	VIN Range	Vehicle-Specific Equipment		
Q7	2010 - 2015	All	Premium Plus and Prestige		

Condition

REVISION HISTORY					
Revision	Date	Purpose			
5	-	Revised title			
		Revised header data (Added model year and DTCs)			
		Revised entire bulletin for clarity			
4	3/4/2013	Republished to correct Elsa display error			
3	2/1/2013	Modified title			
2	11/30/12	Added model years			
1	4/19/12	Original publication			

This bulletin applies only to vehicles with xenon headlights. One of the following conditions is present:

Condition A:

- The customer complains of headlight flickering at highway speeds.
- There is no headlight warning in the cluster, and no DTCs are present in the system.

Condition B:

- The customer complains that the high beams do not function on one side or that one of the low beams flickers intermittently. Additionally, in vehicles with the Prestige trim level, an "Adaptive Headlight Defective" warning may be present in the cluster.
- In vehicles with the Premium Plus trim level (xenon headlights without Audi adaptive light), one of the following DTCs may be stored in the vehicle electrical system control module, J519 (address word 09):
 - DTC 02747 (Solenoid switch for Bixenon (shutter) right Open Circuit)
 - DTC 02748 (Solenoid switch for Bixenon (shutter) left Open Circuit)
- In vehicles with the Prestige trim level (xenon headlights with Audi adaptive light), one of the following DTCs may be stored in the headlamp range control module, J431 (address word 55):
 - DTC 01534 (Left Headlight Beam Adjusting Motor -V48-)
 - DTC 01535 (Right Headlight Beam Adjusting Motor -V49-)

- DTC 02988 (Left/right handing traffic change-over active)
- DTC 02630 (Voltage supply of Right Swivel Module Position Sensor)
- DTC 02631 (Voltage supply of Left Swivel Module Position Sensor)

Technical Background

Condition A:

Audi adaptive light adjusts the level of light distribution for higher rates of vehicle speed. This function turns on at approximately 72 mph and turns off at approximately 62 mph.

Condition B:

One or more of the connectors inside the headlamp housing are disconnected fully or partially from the factory.

Production Solution

Not applicable.

Service

Condition A:

- 1. Confirm that the customer complaint matches the complaint listed under "Condition A" in the *Service* section of this bulletin, and that no DTCs are present.
- 2. Explain the function of Audi adaptive light as listed under "Condition A" in the *Technical Background* section of this bulletin.
- 3. Do not proceed with this bulletin. No repair is necessary.

Condition B:

- 1. Confirm that the customer complaint matches the complaint listed under "Condition B" in the *Service* section of this bulletin.
- 2. Remove the affected headlamp according to the instructions in Elsa at: *Repair Manual>>Electrical System>>94 Exterior Lights, Switches>>Removal Installation>>HID Headlamp, From MY 10.*

- Remove the covers from the back of the headlamp housing. Check all of the connectors inside of the headlamp housing (Figure 1) for proper seating and inspect the locks to ensure that they are fully engaged:
 - Connector "A" can be seated, but not fully engaged (Figure 2). It is important to hold the projector housing when this connector is pushed, otherwise, the projector will swivel.
 - Connector "B" can be fully locked into place, but be rotated 5-10 degrees off-center (Figure 3). Ensure that the harness connector is seated parallel to the connector housing on the headlamp.
 - Connector "C" (Figure 4) is located behind the motor mechanism, which rests below the projector lens. It is a very small two-pin connector that should be adjusted cautiously. If it becomes fully disconnected, it is very difficult to re-connect without the use of special tools. Use your finger or a small set of bent pliers to pull the connector toward you in order to fully seat it.

Figure 4. Connector "C" shown in the locked position.

- 4. If no loose connectors were found and the issue still persists, the issue is outside the scope of bulletin. Do not proceed with the bulletin. Continue with diagnosis by swapping headlamp components to locate the failed part.
 - If a loose connector was found, correct it and ensure that all connectors are fully seated and locked.
- 5 Re-assemble the headlamp and re-install it into the vehicle.
- 6. Clear the DTC(s) and re-test with the low beams, high beams, and all turn signals activated.
- 7. If the DTCs do not return, test the headlamp functionality with a short road test:
 - Repeat the actuation of all headlamps while the vehicle is moving.
 - If Audi adaptive light is equipped, test its functionality by driving the vehicle around a corner at a speed greater than 6 mph (Figure 5).

Use caution when testing the high beams in traffic; do not create an unsafe condition for yourself or other drivers.
