2013-2014 CC – Staining on rear glass found during PDI

If stains or marks are noted on the rear glass during PDI, they can be polished out. Utilize a quality glass polish, which contains cerium oxide (e.g. 3M Glass Polishing Compound, part number 60150) to clean the glass and remove stains. This will need to be obtained through a vendor, as it is not available through VW.
