

Service Bulletin

File in Section: -

Bulletin No.: PIC5982

Date: April, 2014

PRELIMINARY INFORMATION

Subject: Normal Characteristic - Drive Mode Control Changes To Tour At Startup

Models: 2014 Chevrolet Corvette

The following diagnosis might be helpful if the vehicle exhibits the symptom(s) described in this PI.

Condition/Concern

A customer may comment that the Drive Mode changes to Tour even though it was on a different Drive mode during the last Ignition cycle.

Recommendation/Instructions

Note: This is normal operation and no repairs should be performed.

If the vehicle was in Weather or Track mode during the previous drive cycle it will default to Tour mode the next time the vehicle is turned on. This is design intent. It is important to understand that Display Themes and Drive Modes are two separate items that can be linked together or selected separately.

If the customer desires a specific Display Theme for all Drive modes, or desires the Display Theme to change each time Drive mode is changed, this can be selected through the DIC Settings menu. Select from Link to Drive Mode, Track, Sport, or Tour for the cluster theme.

Regardless of the Display Theme setting, the Drive Mode will always default to Tour if the vehicle is shut down in Weather or Track mode.

Customer Information

Please communicate to the customer this condition is a normal operating characteristic of their vehicle. It will not impact the designed performance or reliability of the vehicle. Please share this information with the customer, including a copy of this message.

Please follow this diagnostic or repair process thoroughly and complete each step. If the condition exhibited is resolved without completing every step, the remaining steps do not need to be performed.
