Subject: Fast Park - Luggage rack

Repair procedure for Luggage Rack Brace:

Time allowed for outlined repair procedure: 1.5 Hours

- 1) Purpose is to eliminate any burrs or rough edges on the braces that support the upper two luggage shelves.
- 2) Place a drop cloth to catch any debris while removing any burrs or rough edges. Relocate the drop cloth under the area of the shelf braces being addressed with the grinder.
- 3) There are two braces per shelf. Use an electric or air driven metal grinder to remove the burrs or rough edges of the shelf brace on the leg of the 'L' angle brace on both sides the full length front to back (aisle to wall along each brace). This will be required for both the middle and upper shelves.
- 4) The intent is to remove any burrs or rough material that might have been left inadvertently when the parts were processed prior to installation.
- 5) Remove the drop cloth and clean up any debris missed by drop cloth.

Tools needed:

- Grinder for metal – either an air or electric type
- Drop Cloth to catch the debris
- May require a shop vacuum for debris that missed the drop cloth
