

Display Audio Screen Problems?

AFFECTED VEHICLES

2016 Civic

If the Display Audio (DA) screen has display-related problems, they're coming from the center display assembly, **not** the audio unit or audio-navigation unit.

Typical display-related problems include the following:

- Blank screen
- Flickering or flashing screen
- Discolored screen
- No back lighting
- No touch response

To fix such problems, **don't** order a reman audio unit or audio-navigation unit. A replacement center display assembly is all you need.
