RE: 2015 CR-V Vibration

Print this iN message and provide a copy to the Service Manager, Service Advisors, and appropriate personnel.

Some customers have reported experiencing a vibration that they primarily feel through the driver's seat. Customers who experience the vibration have reported it may happen intermittently, either while stopped with the vehicle in gear or while driving at engine speeds below 2,200 RPM.

On April 7, 2015, we will be posting a customer informational video onto the Honda Owner's website explaining the current situation. Click the link below to watch the video.

<http://honda.vo.llnwd.net/o10/5570/090111c081697837/CRV%20VIBRATION/CRV%20VIBE.swf>

Please review the video and the corresponding information contained within the Service Information System ([click here](#)).

We have created this video to help you effectively communicate the current situation to customers who have reported experiencing this vibration.

Thank you,
