2012-2015	Prius C	2008-2015	Highlander HV
2007-2015	Camry HV	2009-2015	Corolla

**CONDITION**

Customers complain of various Bluetooth connectivity concerns after upgrading to iOS 8.0 and later. Conditions typically experienced include inability to pair the iPhone to the system, poor sound quality during phone calls placed through the audio/navigation system, and the inability to place a hands free phone call using the audio/navigation system.

**RECOMMENDATIONS**

The condition was resolved in iOS 8.1 and later, it is recommended to have the customer update their iPhone to the latest iOS version currently available.

If after performing the iOS update to the latest version the customer is still having Bluetooth connection issues it is recommended to "Reset all Settings" on the iPhone and delete "Personal Data" in the vehicle, then create a new Bluetooth pairing between the iPhone and the vehicle.

How to reset all settings on iPhone:

- Go to Settings → General → Reset All Settings

Refer to vehicle audio/navigation system owner's manual for instructions on how to "Delete Personal Data" in the vehicle.
