

Service Bulletin

PRELIMINARY INFORMATION

Subject: Slosh Noise From Rear Of Vehicle

Models: 2010 - 2015 Chevrolet Camaro

This PI was superseded to update Model Years, Customer Information and Warranty Information. Please discard PIC5295A.

The following diagnosis might be helpful if the vehicle exhibits the symptom(s) described in this PI.

Condition/Concern

A customer may comment that they hear a sloshing noise while stopping. The noise is coming from the rear of the car and may be described as coming from the fuel tank.

Recommendation/Instructions

The noise may be from the fuel tank or the exhaust muffler. To confirm where the noise is coming from, add or remove 3 gallons of fuel in the fuel tank and retest.

- If the noise is gone after changing the fuel level then there is nothing you can do to change this condition. The noise is considered normal for that level of fuel in the tank.
- If the noise is present with all fuel levels, inspect for a blocked drain hole in the mufflers. Use an awl or small pick to clear the drain hole.

Customer Information

For noise conditions associated with fuel slosh, please communicate to the customer this condition is a normal operating characteristic of their vehicle. It will not impact the designed performance or reliability of the vehicle. Please share this information with the customer, including a copy of this message.

Warranty Information

For vehicles repaired by clearing the muffler drain hole under warranty, use:

Labor Operation	Description	Labor Time
4081008 *	Clear Muffler Drain Hole	0.3 hr
* This is a unique labor operation for bulletin use only. This will not be published in the Labor Time Guide.		

Please follow this diagnostic or repair process thoroughly and complete each step. If the condition exhibited is resolved without completing every step, the remaining steps do not need to be performed.

GM bulletins are intended for use by professional technicians, NOT a "do-it-yourselfer". They are written to inform these technicians of conditions that may occur on some vehicles, or to provide information that could assist in the proper service of a vehicle. Properly trained technicians have the equipment, tools, safety instructions, and know-how to do a job properly and safely. If a condition is described, DO NOT assume that the bulletin applies to your vehicle, or that your vehicle will have that condition. See your GM dealer for information on whether your vehicle may benefit from the information.
