Ventana LE	<input type="checkbox"/>	London Aire	<input checked="" type="checkbox"/>		

Description

Newmar Corp. has decided some 2016 motorhomes equipped with a HWH Hydraulic Full Wall Slideout may have been shipped with low fluid level in HWH hydraulic system. This TSB only applies to units with a hydraulic Slideout system built prior to 9/14/2015.

Issue: If there is not enough fluid in the reservoir tank; the HWH slide system (when activated) will draw in air with the fluid and cause uneven pressure on the HWH chain/bracket while opening and closing the slide. This could cause the chain/bracket to loosen over time.

Recommended Action

Correction: Follow attached procedure to correct the fluid level in the HWH hydraulic system.

Flat Rate Code: TSB 436

Labor time: The time to complete this fluid level check is .2 (two-tenths) of an hour. With the proper prior authorization from Newmar Dealer Support, up to .5 (one-half) of an hour is allowed to perform the fluid level check and complete the air bleeding process.

Please read this bulletin in its entirety prior to beginning any diagnosis or repairs.

How to Add Fluid to a HWH Full Wall Slideout Hydraulic System

Relevant Coaches

Brand: Dutch Star, Mountain Aire, London Aire, Essex, King Aire
 Year(s): 2016
 Floorplan: All Floorplans that include a Full Wall Hydraulic Slideout

Issue

Some 2016 motorcoaches with Full Wall Hydraulic Slideouts may have had low fluid levels when shipped from Newmar.

Action

Follow the service procedure below to correct the condition. The time to complete this fluid level check is .2 (two-tenths) of an hour. With the proper prior authorization from Newmar Dealer Support, up to .5 (one-half) of an hour is allowed to perform the fluid level check and complete the air bleeding process.

Necessary Tools & Parts

Part Name	Part Quantity	Vendor Part Number	Newmar Part Number
HWH Hydraulic Fluid	As Needed	HWH22866	013807

Service Procedure

Checking and Adding Fluid to the Hydraulic System

Step 1

Retract the jacks and extend the HWH Hydraulic Full Wall Slideout. Remove the reservoir cap located under the front lower cap of the coach (on most models).

HWH Hydraulic Pump

Step 2

Remove the dipstick. Wipe the dipstick, and reinsert it into the reservoir to check the fluid level. The proper level should be between the bottom and top lip of the dipstick.

HWH Dipstick

Step 3

Fill the reservoir with hydraulic fluid until it reaches the proper level on the dipstick. If the fluid level is very low and you suspect there is air in the system, follow the remaining steps to purge the air. If there is no air in the system, reinstall and tighten the reservoir cap to complete this procedure.

Purging Air from the Hydraulic System

Step 4

Extend and retract the leveling jacks three full cycles. Do not auto-level, as this will not fully extend the jack cylinders.

Make sure the Slideout is always in the extended position during the purging procedure.

Step 5

Remove the reservoir cap and pull out the dipstick. Wipe the dipstick, and reinsert it into the reservoir to check the fluid level. If necessary, add more fluid until it reaches the proper level on the dipstick. Reinstall the reservoir cap.

Step 6

Repeat steps four and five until the proper fluid level is maintained.

Step 7

Extend and retract the Hydraulic Full Wall Slideout three full cycles.

Make sure the Slideout is always in the extended position during the purging procedure.

Step 8

Remove the reservoir cap to recheck the hydraulic fluid. If necessary, add more fluid to the reservoir until it reaches the proper level on the dipstick. Reinstall the reservoir cap.

Step 9

Repeat steps seven and eight until the proper fluid level is maintained.
