

42 Rear axle shaft leaks at differential

42 15 24 2026049/9 June 30, 2015. Supersedes Technical Service Bulletin Group 42 number 13-17 dated March 18, 2013 for reasons listed below.

Model(s)	Year	VIN Range	Vehicle-Specific Equipment	
S4	2010 - 2011	All	With Sports Rear Differential	
S4	2012	Up to production date 7/10/2011	With Sports Rear Differential	
S5	2010 - 2011	All	With Sports Rear Differential	
S5	2012	Up to production date 7/10/2011	With Sports Rear Differential	
S5 Cabriolet	2010 - 2011	All	With Sports Rear Differential	
S5 Cabriolet	2012	Up to production date 7/10/2011	With Sports Rear Differential	

Condition

REVISION HISTORY				
Revision	Date	Purpose		
9	-	Revised header data (added model year)		
8	3/18/2013	Revised Required Parts and Tools (added information)		
7	10/5/2012	Revised header data		

Oil is leaking in the area of the Quattro sports rear differential (PR-PDU, PDR, or GH2) side flange or axle shaft inboard flange.

Technical Background

Insufficient sealant on the protective cap on the inboard constant velocity joint at the rear differential on vehicles with a sports differential.

The following table lists PR codes that identify vehicles with a rear sports differential.

Technical Service Bulletin

PR Code	Description	Notes
PDR	Audi drive select with rear sport differential	Must be accompanied with PR GH2 (rear sports differential)
PDU	Rear sport differential	Standalone option
		May be accompanied with PR GH2
		Comes with Audi drive select control panel even if vehicle does not have Audi drive select functions
GH2	Rear sport differential	Standalone option
		May be accompanied with PR PDU or PR PDR
		Comes with Audi drive select control panel even if vehicle does not have Audi drive select functions

Production Solution

Optimized use of sealer in production from 07/10/2011.

Service

- 1. Inspect the rear inner CV joints where they connect to the rear sports differential:
 - If there is oil sweating or residue, do not make any repairs.
 - If there are clear oil drips, proceed to step 2.
- 2. Determine source of the fluid:
 - Grease used in the drive shaft CV joints is almost odorless. If the fluid does not have any odor, proceed to step 3.
 - Differential fluid has a pungent smell. If the fluid has a pungent smell, this TSB does not apply.
- 3. Replace the affected drive shaft per Elsa instructions.

Tip: It is not necessary to replace both drive shafts if only one drive shaft is affected by this condition.
