Subject: Diagnostic Content Versions – New Designation

Date: June 11, 2015

1.0 – Announcement

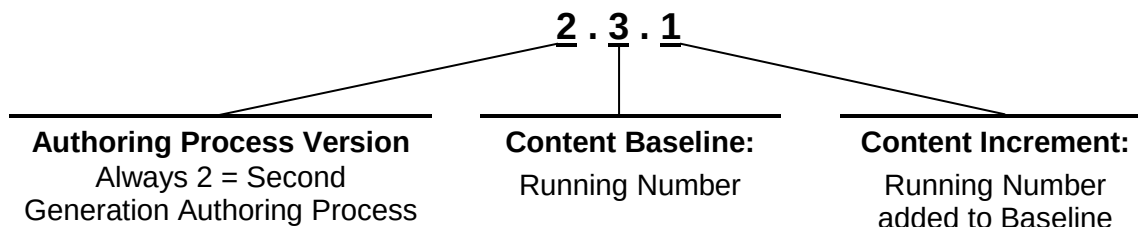

Audi AG has updated their diagnostic content authoring process and implemented a new, simplified diagnostic content version numbering designation.

The new content version designation enables “baseline” and “increment” data types to be identified in updated version releases. The new version designation is effective immediately. Refer to the following section for additional information.

2.0 – Content Version Designation - Definitions

2.1 - Version Designation Legend:

Example: Audi Content **v2.3.1**:

2.2 - Version Designation Definitions:

Baseline data:

- Major content updates where new, corrected or missing data **completely overwrites all existing baseline data.**
- These updates tend to be large.

Increment data:

- Minor content updates where new, corrected or missing **data is added to the existing baseline data.**
- These updates tend to be small.

For information on how to identify the installed content version, refer to **Service Information – ODIS Service** document title: **Online Update Guide – Section 7.0.**
