	Battery	000915105DEDSP	1
	Battery	000915105DGDSP	1
Battery	000915105DHDSP	1	

Resetting the service interval display

Your authorized Audi dealer will reset the corresponding service schedule after performing the appropriate service on your vehicle. You also have the possibility to reset the oil change schedule after having performed an oil change according to the Audi specifications.

- Switch the ignition on.

- Pull the knob ⇒ *fig. 19*. The message, **Service due!** appears.

Fig. 19 Section of instrument cluster: Service interval display

Pull the knob until the display **Oil change in ----- mi (km)--- days** appears in the display. If the **RESET** button is not pulled within 5 seconds, the display reset mode closes.

Note

If you disconnect the battery terminals, no calculations can be made for the service interval display during this time and no service reminder will appear. Remember that observing the proper service intervals is vitally important to extending the life of your vehicle, particularly the engine, and maintaining its value. Even if the mileage driven is low, the maximum period of one year from one service to the next must not be exceeded.

Tips

- If a malfunction is present (red symbol), the distance remaining cannot be called up.
- Do not reset the display between service intervals. Doing so will result in an incorrect display.
- If the battery is disconnected, the Service Interval Display values are retained.
- On vehicles with the Driver Information System, you can also call up the service interval display.
- If the service was not performed at the correct time or the service interval display was not reset after service was performed, the additional mileage driven or the elapsed days will be shown as negative numbers.
