Number: VSP-15-01

Subject: Proposition 65 Label Placement (California Dealers Only)

Date: May 21, 2015

Proper placement of the Proposition 65 label is important to prevent damage to the window seals.

Please ensure a 2 inch minimum distance between label and any window seals.

If incorrectly placed, adhesive residue may be left on the window or the window seals may be damaged if the purchasing customer attempts to remove the Proposition 65 label.

- **Incorrect Label Placement (too close to slot seal)**

If the purchasing customer would like to have the label removed at the time of purchase, use a commercially available adhesive remover to carefully clean the label from the glass.

Starting in one corner, carefully peel the label off of the glass.

Apply adhesive remover to a shop towel and rub onto glass to prevent overspray to surrounding areas.

Take care to prevent damage to the window rubber seals while cleaning the glass.

Once all of the adhesive has been removed, use a commercially available glass cleaner to clean any remaining residue from the glass.
