

# Technical Service Bulletin

## 91 Traffic reports or speed and flow data are unavailable in MMI navigation

91 15 26 2042097/1 December 8, 2015.

Model(s)	Year	VIN Range	Vehicle-Specific Equipment
All	2004 - 2018	All	With navigation

## Condition

The traffic feature in the MMI navigation is inoperative.

### Note:

If the vehicle is a model year 2016 A6 or A7, see TSB 2042013: *91 Audi connect online destination search, Google Earth navigation view, or INRIX online traffic is not available*. There is a known server issue that can only be resolved through a change to the Audi AG backend server.

## Technical Background

Audi has changed traffic providers over the years as new technologies have developed. This bulletin provides an overview of the different systems and the basic checks that can be performed to diagnose complaints related to traffic in the MMI navigation system.

Audi MMI	Model Years	Traffic Provider	ESN or License	Subscription Type
RNS-E	2005 - 2009	N/A	Not applicable.	Not applicable.
RNS-E	2010 - 2015	TMC (FM RDS)	Not applicable.	None required.
MMI2G	2007 - 2010	SIRIUS	Separate traffic ESN.	Customer paid to SIRIUS.
MMI3G	2009 - 2012	SIRIUS	Separate traffic ESN.	Customer paid to SIRIUS.
MMI3G+	2011 - 2017	SIRIUS	Single ESN for audio and traffic.	Customer paid to SIRIUS (1 year or 4 years free after retail sold).
MIB1	2015 - 2016	SIRIUSXM	Single ESN for audio and traffic.	Customer paid to SIRIUSXM (4 years free after retail sold).
MIB2	2016	INRIX online	License on AUDI AG server and in MMI main unit.	Included with Audi connect data subscription.

# Technical Service Bulletin

MIB2	2017	INRIX online	License on AUDI AG server and in MMI main unit (Can be seen in vehicle in the MMI license screen).	Included with Audi connect data subscription.
------	------	--------------	--	---

## Production Solution

Not applicable.

## Service

There are different diagnostic paths for each system. See the table below for system-specific troubleshooting information.

Audi MMI	Model Years	Traffic Provider	Diagnostic Path Suggestion	How to verify subscription
RNS-E	2005 - 2009	Not applicable.	Tell the customer that traffic is not supported with this system.	Not applicable.
RNS-E	2010 - 2015	TMC (FM RDS)	Using GFF, ensure that the coding and adaptation of the navigation radio unit is correct. Ensure that the part number of the radio navigation unit is correct for the USA. Check to see if the vehicle came from the factory with this system or if it was retrofitted. If possible, compare with like vehicle.	No subscription is required. The information is transmitted over certain local FM stations using RDS (Radio Data System). If the FM stations are not transmitting the data or are having an issue, then the data will not be received by the vehicle. It's important to note that not all FM stations transmit RDS traffic information. Contact the local radio station or use an online database listing to find a supported station in your market ( <a href="http://www.navteq.com/rds-traffic/">http://www.navteq.com/rds-traffic/</a> ).
MMI2G	2007 - 2010	SIRIUS	Check MVB 06 in the satellite tuner (diagnostic address 0F) to ensure that	Try sending a refresh signal to the vehicle using the SiriusXM dealer support

			the system is subscribed and activated.	website and/or try calling SiriusXM dealer support (see <i>Additional Information</i> , below).
MMI3G	2009 - 2012	SIRIUS	Check MVBs 11, 12, 13, and 14 in the radio unit (diagnostic address 56) to ensure that the traffic signal is being received and to verify the overall SDAR (Satellite Digital Audio Radio) system functionality.	Try sending a refresh signal to the vehicle using the SiriusXM dealer support website and/or try calling SiriusXM dealer support (see <i>Additional Information</i> , below).
MMI3G+	2011 - 2017	SIRIUS	Check MVBs 11, 12, 13, 14, and 15 in the radio unit (diagnostic address 56) to ensure that the traffic signal is being received and to verify the overall SDAR (Satellite Digital Audio Radio) system functionality.	Try sending a refresh signal to the vehicle using the SiriusXM dealer support website and/or try calling SiriusXM dealer support (see <i>Additional Information</i> , below).
MIB1	2015 - 2016	SIRIUSXM	Check MVBs using keyword search "SDARS" in the MMI main unit (diagnostic address 5F) to ensure that the traffic signal is being received and to verify the overall SDAR (Satellite Digital Audio Radio) system functionality.	Try sending a refresh signal to the vehicle using the SiriusXM dealer support website and/or try calling SiriusXM dealer support (see <i>Additional Information</i> , below).
MIB2	2016	INRIX online	Ensure that the customer's SIM card is activated and has enough remaining data to provide traffic.  Check the customer's SIM card in a like vehicle and use a known good SIM card in the customer's vehicle.  If everything fails, contact TAC before replacing the MMI main unit as there may be a license issue on the AUDI AG server.	Use the Audi connect web portal to check subscription status using the 20-digit ICCID on the customer's SIM card ( <a href="http://www.myaudiconnect.com">http://www.myaudiconnect.com</a> ) and/or call the Audi connect support line at 1-877-505-2834 and select option 1.
MIB2	2017	INRIX online	These vehicles have	Use the Audi connect web

			embedded SIM cards inside the MMI main unit (address word 5F). Ensure that the customer is registered on the myAudi customer portal ( <a href="http://my.audiusa.com">http://my.audiusa.com</a> ) and has accepted the terms and conditions on the site for all services. Ensure other Audi connect services are working. If all Audi connect services are not working, then call the Audi connect support line at 1-877-505-2834 and select option 1. DO NOT SWAP THE MMI MAIN UNIT! If everything fails then contact TAC before replacing the MMI main unit because there could be a license issue on the AUDI AG server.	portal to check subscription status using the VIN ( <a href="http://www.myaudiconnect.com">http://www.myaudiconnect.com</a> ) and/or call the Audi connect support line at 1-877-505-2834 and select option 1.
