TECHNICAL

Subject: Coolant Smell and/or Coolant Leak from Hose at Thermostat Housing

Brand:	Model:	Model Year:		VIN:		Engine:	Transmission:
		from	to	from	to		
Chevrolet	Volt	2016	2016			All	All

Condition	Some customers may comment on a coolant smell or coolant leaking on the ground.
Cause	 <p>This may be caused by a hose clamp not positioned correctly on the radiator outlet hose at the thermostat housing.</p>

Correction

If you encounter a vehicle with the above concern, complete the following steps:

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle in SI.
2. Visually locate the radiator outlet hose clamp securing it to the thermostat housing.

3. Using hose clamp pliers (Special Tool Number — GE-47622) or equivalent, carefully slide the clamp towards the thermostat housing approximately ¼ in (6.35 mm) — ½ in (12.7 mm) closer to the edge of the hose.
Note: There is glue securing the clamp in its original location. Use caution when separating the clamp from the glue.
4. Once the clamp is moved into its new position, wipe any coolant residue and visually inspect that the concern is corrected.
5. Inspect the coolant level and fill as needed.

Warranty Information

For vehicles repaired under warranty, use:

Labor Operation	Description	Labor Time
4081078*	Radiator Outlet Hose Clamp Reposition	0.3 hr
*This is a unique Labor Operation for Bulletin use only.

GM bulletins are intended for use by professional technicians, NOT a "do-it-yourselfer". They are written to inform these technicians of conditions that may occur on some vehicles, or to provide information that could assist in the proper service of a vehicle. Properly trained technicians have the equipment, tools, safety instructions, and know-how to do a job properly and safely. If a condition is described, DO NOT assume that the bulletin applies to your vehicle, or that your vehicle will have that condition. See your GM dealer for information on whether your vehicle may benefit from the information.
