Check as follows:
1. Using a 17 mm Allen tool, remove the Allen head plug from the oil priming port on the oil coolant module.

2. If equipped with an oil sample valve, remove the valve and washer.

**NOTE:** Tool J-49181 is used to adapt the J-45299 priming pump.

3. Install oil system priming adaptor tool (J-49181) into the oil priming port (1) in the oil coolant module.
4. Install the engine pre-lube kit (J-45299) to the fitting adaptor (1).

5. Remove the rocker cover. Refer to section "Removal of the Rocker Cover".
6. Fill the canister with four quarts of oil.
7. Open the valve on the primer and start pumping.
8. Inspect the rockers and engine brake solenoids for excessive oil. If leaks are present, repair the leaks as necessary.
9. Install the rocker cover; Refer to section "Installation of the Rocker Cover".
10. Close the valve on the priming tool and loosen the fitting; do not completely remove it from the adaptor.
11. Remove the priming adaptor from the oil coolant module with the line attached to keep the oil from flowing out of the module.
12. Install the Allen head plug or oil sample valve to the module and torque to 70 to 80 N·m (51 to 59 lb·ft).
