Complaint

When attempting to attach the case to the case mount, it does not fit properly;
this can cause the lock not to operate and/or the key to break off if excessive
force is applied.

Cause

Fault with the welding jig resulting in improperly aligned tabs on the case mount.

Measure

Picture 1 shows the mount with the four tabs that engage the case.

Picture 2 shows a tab that is properly aligned.

Picture 3 shows a tab that is improperly aligned.

If the mount is defective, as shown in picture 3, order a new mount and claim under
warranty
