

**SUBJECT****HU-H Headunit: Navigation System Road Map Usage****MODEL**

F55 (Cooper, Cooper S 4-door)

F56 (Cooper, Cooper S 2-door)

With option 609 (Navigation System Professional), which is also included in the package option 7L5

INFORMATION

For the US market, all vehicles come pre-loaded from the factory with the latest navigation system road map database version that was available at the time of vehicle production.

Therefore, there will be **no physical copy** of the navigation system road map data media DVD set or USB stick placed in these vehicles at the Vehicle Distribution Center (VDC).

NOTE: Additionally, all replacement HU-H parts come with a pre-loaded version of the current available navigation system road map database installed.

A set of DVD copies of the navigation system road map database, **HU-H NAVI Road Map North America NEXT**, is shipped to all MINI dealers through the automatic tool shipment program **with each release of a navigation system road map database**.

IMPORTANT: Additional copies or earlier NAV road map database versions cannot be ordered individually!

Therefore, please take special care to archive the HU-H NAV road map DVD sets!

The NAV road map data on the DVD set can also be installed into the Network Attached Storage (NAS). From there, it can then be installed onto the HU-H in the vehicle, using the Integrated Service Technical Application for Programming (ISTA/P).

For installation of the navigation system road map data media DVD set into the Network Attached Storage (NAS), please contact your ISPI NEXT Administrator.

In addition to this procedure, it is also possible to download the NAV road map data on the DVD set directly onto the hard disc drive (HDD) integrated into the HU-H by inserting the DVDs one by one into the HU-H internal DVD drive. It will take approximately 2 to 2.5 hours to download the entire database.

Please note that the HU-H NAV road map DVD set is for workshop use only, and is not to be left in customers' vehicles.
