Service Information Bulletin

Subject: Diagnostics D3.52 Release Notes

Models: All

General

Diagnostics D3.52 is published with the ISTA 3.0 application V15304 or higher.
The new ICOM firmware 3.14.03 is due to be published at the same time; this firmware version is necessary for complete communication with the control units of the upcoming new models C 650 Sport (K18/11, 0C04/0C14) and C 650 GT (K19/11, 0C05/0C15).
The software will be available online for the "ISPI Next" workshop systems.

New diagnostic ranges

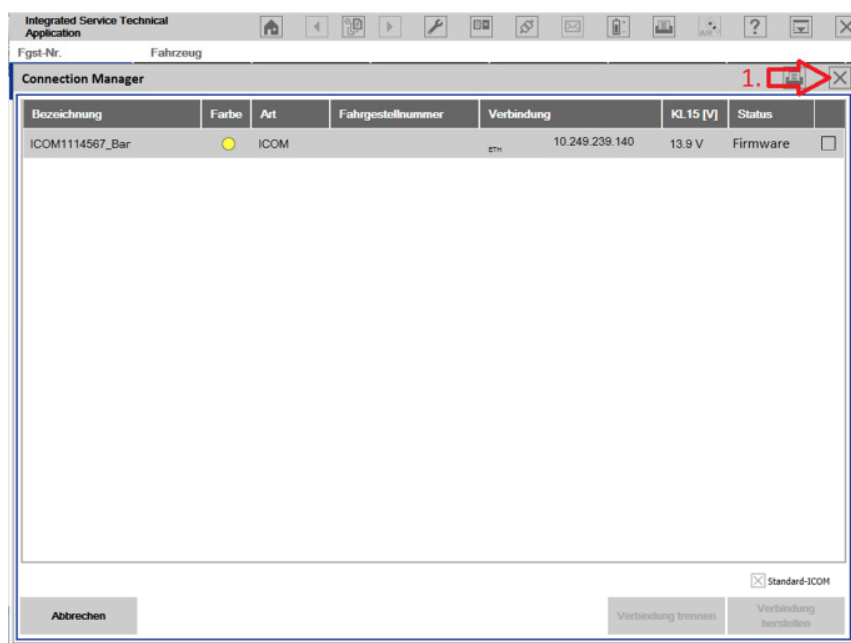

- Complete, interactive diagnosis for the following models:
C 650 Sport (K18/11, 0C04/0C14)
C 650 GT (K19/11, 0C05/0C15)

Note on installation

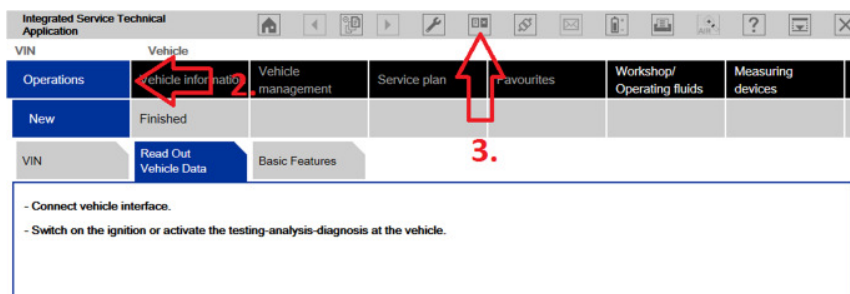

If the new ICOM firmware has been made available but not yet installed on the ICOM being used, the ICOM shows "Firmware" in the information bar of the Connection Manager and cannot be used (see screenshot below, No. 1.).

If this happens, proceed as follows:

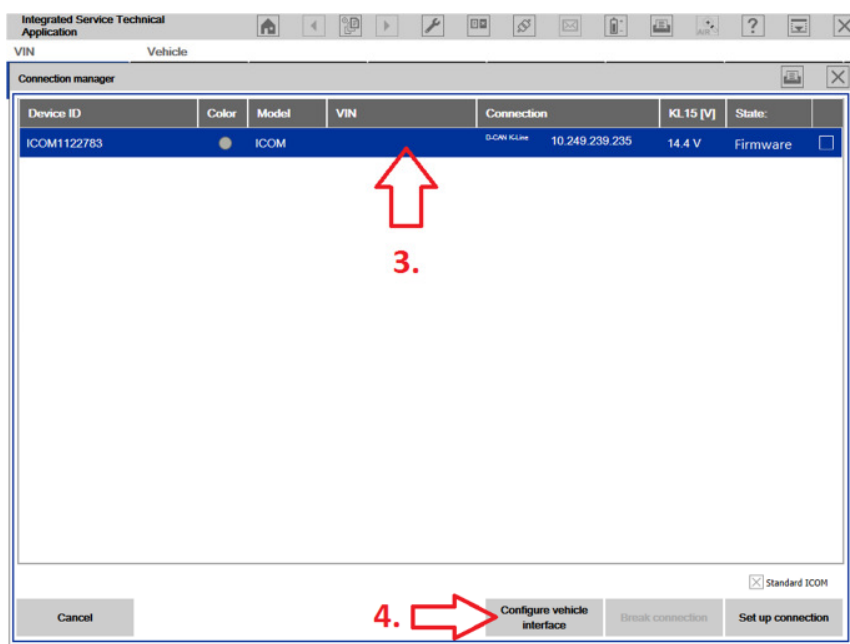

1. Close the Connection Manager from within the "Read vehicle data" menu.

2. In ISTA, select at least the "Operations" tab, to make the Connection Manager selectable in the top toolbar.

3. Start the Connection Manager by clicking on the appropriate icon in the top toolbar and select the ICOM in question (which must be running and connected to the network) (when selected, it is indicated by a blue background).

4. Click on the button labelled "Configure vehicle interface" (at the bottom edge of the Connection Manager window). The ICOM firmware update starts automatically. No further settings have to be made in the configurator for the ICOM.
