Meritor WABCO SmartTrac Electronic Stability Control

We are pleased to announce that Meritor WABCO SmartTrac electronic stability control (ESC) is now available to order on the Saf-T-Liner C2. SmartTrac ESC is an advanced vehicle safety system that automatically intervenes when it senses instability that could lead to a rollover or a loss of control. If the vehicle shows a tendency to leave the driver's intended path, SmartTrac ESC will help the driver maintain control of the vehicle. The system operates by applying the appropriate brakes selectively and better aligns the vehicle with the driver's intended path.

SmartTrac ESC is currently only available on diesel powered air brake equipped chassis. WABCO ABS (FL-490-101) with traction control is required with ESC.

SmartTrac™

Stability Control Systems

Below is a summary of changes that will take effect in ASIST.

Feature	Description	Action
FL-49B-004	Electronic Stability Control	Released
