45019 2015 Transit Rear Clunk, Squeak, or Rattle Type Noise Occuring Over Bumps And/Or When Turning

Some 2015 Transit vehicles may exhibit a clunk, squeak, or rattle type noise from the rear of the vehicle over bumps and/or when turning. Engineering is investigating the concern and is in the process of evaluating a revised torque specification to address the concern. If a vehicle exhibits this condition, tighten rear stabilizer link lower nut → W520114-S442 (between link and swaybar) to 82 lb.t. (110Nm). Please submit a Global Concern Report if a noise concern is isolated to this area but not resolved by tightening to this revised specification.
