45238 2016 Police Utility - Remote Keyless Entry Fob Programming

The 2016 Police Utility vehicle Remote Keyless Entry (RKE) programming procedure has changed and now uses a higher security protocol for the RKE fob. The 8 key cycle procedure, used on 2013-2015 Police Utility vehicles, cannot be used. In addition, prior model year RKE fobs cannot be used on 2016 vehicles even though they look similar. The 2016 Police Utility vehicles require the use of RKE part GB5Z-15K601-A. To program 2016 RKE fobs, use IDS Version 96.03 or later and the VCM-II. Select 'Toolbox' then 'Body', then 'Security', and finally 'Remote Keyless Entry'. The 48 character string, which is needed for programming, is located on the inside of the fob. Follow the on-screen prompts to complete RKE programming.
