45318 2016 Transit Equipped With Navigation And SYNC 3 Navigation Repeater Information
Feature Disabled Vehicles Built On Or After 8/12/2015

2016 Transit vehicles equipped with Navigation and SYNC 3 and built on or after 8/12/2015 have the navigation repeater information that is normally displayed in the Instrument Panel Cluster (IPC) message center disabled at this time. The navigation route guidance will still be displayed on the SYNC 3 display screen. No repairs should be attempted on a customer symptom of IPC message center missing navigation repeater information. Engineering is aware of this concern and is investigating. Continue to monitor OASIS for future updates.
