

Service Bulletin

File in Section: -

Bulletin No.: PIT5448A

Date: August, 2015

PRELIMINARY INFORMATION

Subject: Diagnostic Tip - Vehicle Stops Running After Idling for 2.5 Hours

Models: 2015 Cadillac Escalade Models
2015 Chevrolet Tahoe, Suburban
2015 GMC Yukon Models
Equipped with Push Button Keyless Start (RPO BTM)

This PI was superseded to update Administrative Details. Please discard PIT5448.

The following diagnosis might be helpful if the vehicle exhibits the symptom(s) described in this PI.

Condition/Concern

Some customers may comment that the engine stops running after idling for 2.5 hours with shifter in Park.

Recommendation/Instructions

A engine run timeout feature is standard on all push button start vehicles. There are 2 different scenarios for how the feature will work

1. If the customer leaves the vehicle with the fob while the engine is running and the shifter in park it will power off after 2.5 hours. (i.e. no fob present.)
2. If the customer is sitting with engine running and the fob is in the vehicle after 2.5 hours the vehicle will reach out and look for the fob and if it locates it in the vehicle it will reset the timer an additional 2.5 hours (5 hours total) then the vehicle will power off.

Note: If at any time during the first two scenarios the vehicle shifter is removed from park, the timer will reset and start over

This is normal operation and no repairs should be made.

Customer Information

Please communicate to the customer this condition is a normal operating characteristic of their vehicle. It will not impact the designed performance or reliability of the vehicle. Please share this information with the customer, including a copy of this message.

Please follow this diagnostic or repair process thoroughly and complete each step. If the condition exhibited is resolved without completing every step, the remaining steps do not need to be performed.
