Brian, Paul,

3-23-16

I have assigned a part number (1004302) and created it in the Part Master and an Auto-Cad drawing has been made. A cost quote is required.

I believe Mike Garner should be contacted to definitely confirm this is the way they want to go. To determine how many pieces are required

Instructions will need to be written, with photos.

The data will need to be included in the monthly "Customer Contact" file.

An ECN will need to be created also.

The bar will need to be added to the current 800M006 Dolly frame sold in part sales.

Please note: Over the years the drawbar override bracket, to which this handle mounts, has not been installed in exactly the same position. This will require some additional work to be done to install the bar.

Alan

I believe that is correct, yes.

Lee Randolph had taken the lead on that portion, and I believe he had said they were good to go with that design prior to his departure.

I think they were good to try your design. Rob, can you confirm?
