

EZ Loader Boat Trailers

29 February 2016

Service Bulletin

Subject: Target bunk interference

Model: Robalo 246 trailers

Summary: Some Robalo 246 boats have experienced interference with the target bunks during loading and unloading. Your satisfaction with our trailer is very important to us so we are taking measures to prevent this condition or, if it has occurred, to fix the condition.

Action: To alleviate this condition, the target bunks should be repositioned to allow increased clearance from the strakes. The aft bunk support attached to the front target bunks will be repositioned to 29" from the end of the cross member to the edge of the bunk support. The height of the bunk support will be set at 4.13" from the top of the cross member to the center of the pivot bolt. The main bunks will also be repositioned 6" aft and will additionally require the winch stand to be moved aft per the drawing. Moving the main bunks aft will also reduce the tongue weight of the trailer. This service should be completed per the specification drawing attached.

If you would prefer to have your local EZ Loader dealer perform this service, this service will be provided to you at no charge until September 1st 2016. EZ Loader will pay the expense of this service up to 1 1/2 hours at \$75.00/hr. Should you choose to have your EZ Loader dealer perform this service, please have them contact Jason Villella in EZ Loader's warranty department at 800-398-5623 ext. 2744 prior to starting this service. Any necessary documentation paperwork can then be forwarded to the dealer.
