

Helicopter/Skipping Noise from Audio Unit

AFFECTED VEHICLES

2016 Pilot

When playing the audio unit, are you hearing a noise from the speakers that sounds like a helicopter hovering or a CD skipping? This noise seems to be influenced by the **Neural** (surround sound) setting. When it's turned off, the noise stops. When it's turned on, the noise starts up again. This noise is also canceled when you cycle the ignition.

We're aware of this problem and are making good progress with our investigation. We expect to wrap things up and post a service bulletin with repair info by the end of this coming September.

In the meantime, **do not** replace any components. Doing so **won't** fix this problem.
