

Navigation System Update

AFFECTED VEHICLES

2016 Accord with navigation system

Do you have a vehicle in your shop for any or all of these concerns?

- Entering web browser text overwrites characters
- Voice recognition ends before you can speak
- SiriusXM[®] Radio information is mismatched between the upper and lower displays
- Android Auto terminates after ending a call
- Upper and lower screens are blank
- Voice recognition is poor
- Navigation turns on with remote engine start
- Navigation unit reboots

We're currently working on software to fix these concerns and will post a service bulletin this coming August. In the meantime, **do not** replace any components. Doing so **won't** fix these concerns.
