

## Helicopter/Skipping Noise from Audio Unit

### AFFECTED VEHICLES

2016 Pilot Touring and Elite

**EDITOR'S NOTE:** This article replaces the one posted in **June 2016**.

When playing the audio unit, are you hearing a noise from the speakers that sounds like a helicopter hovering or a CD skipping? This noise seems to be influenced by the **Neural** (surround sound) setting. When it's turned off, the noise stops. When it's turned on, the noise starts up again. This noise is also canceled when you cycle the ignition.

To address this issue, replace the audio unit. Remanufactured units have been updated. We'll also be releasing a USB software update along with a service bulletin this coming October.
