

SSM 45892	Some 2016-2017 Escape vehicles equipped with a 1.6L/1.5L AWD or a 2.0L FWD/AWD may exhibit front brake squeal when applying the brakes. The noise most commonly occurs after the brakes have warmed up, however the noise may occur during other driving conditions. Engineering is investigating the brake squeal concern to determine the root cause. If normal diagnostics in Workshop Manual (WSM), Section 206-00 do not indicate a fault then no repair should be performed to resolve the brake squeal. To assist with the investigation use the Report A Vehicle Concern link at the bottom of the Oasis report and submit a Global Concern Report (GCR). Continue to monitor OASIS for updates.
