**Special Tools and Equipment**

**Number: ATE-16-08**

**Subject: Audi Rear Camber Adjustment Fastener Information**

**Date: April 25, 2016**

Starting in the 2016 Audi Q7 and A4 there is a special fastener being used on the eccentric bolt used for adjusting the rear camber. There has been some confusion on what tool to use to loosen/tighten this fastener.

A quality 21 mm multi-point (12 point) socket/wrench works best to remove the fastener.

# Service Information

---

To install the fastener to the proper torque specification please use **VAG 1332 – Torque Wrench** and either **T10188 - Wrench - Elbow Wrench - 21mm** or **VAG 1332/I7 - Torque Wrench 1332 Insert - Ring Wrench - 21mm**. You can also use a quality torque wrench and 21mm multipoint socket.

**T10188 - Wrench - Elbow Wrench - 21mm**

**VAG 1332/I7 - Torque Wrench 1332 Insert - Ring Wrench - 21mm**
