2010 Touareg - No ECM Communication using ODIS

When working on a 2010 Touareg please verify which model is being worked on, due to the split year between 7L and 7P models. 7L is Touareg 2 and 7P is the 3rd generation model. If working on a 7P model and 7L is selected, there will be no communication with powertrain Can-Bus due to ODIS scan tool communication speed protocol. There will be communication with some modules. Please select 7P and verify communication with scan tool.
